Concordia setup

user
main(argv)
app:ConcordiaApp
config = GameConfig(argv)
GameController(config)
crt:GameController
GameBuilder(config)
crt:builder:GameBuilder
build()
OracleGameDAO(dsn)
dao:OracleGameDAO
connect()
Game(config)
game:Game
STEP 1 - Read the ORDB and create all objects
Board(config.map)
board:Board
selectProvinces(config.map)
province rows
[For each province row]
Province(name, color)
province:Province
add_province(province)
selectCities(province)
city rows
[For each city row]
City(name, letter, nb_house_max)
city:City
add_city(city)
index_city(city)
STEP 2 - Prepare the stacks of card
selectRoutes(config.map)
route rows
[For each route row]
add_route(city_a, city_b, kind)
setBoard(board)
STEP 3 - Distribute the city tokens
select_city_tokens(config.map)
30 city tokens row
distribute_city_tokens(tokens, rng)
suffle(tokens)
[For each city of the board]
set_token(token of the same letter)
reveal token()
good(brick, food, look, wine or cloth)
assign_bonus_market()
[For each province of the board]
most_valuable_good()
[For each city of the province]
good()
good
best good
set_bonus_market(BonusMarket(best good))
STEP 4 - Prepare the stack of card
cardMarket()
market:cardMarket
select_personnality_cards()
30 card rows deck [I...V]
[For each card rows]
PersonalityCard(name, god, deck_number, actions)
card:PersonalityCard
add_card(card)
player:Player
prepare_stack(config.nb_player)
remove the cards whose numeral is greater than nb_players
shuffle each deck, then pile them up: I on top, then II ... V
display = draw(7)
set_aside(Concordia card)
set_market(market)
STEP 5 - Player setup
[i=1 .. config.nb_player]
[i == config.human_position]
HumanPlayer(Color.i)
AIPlayer(Color.i, CardStrategy)
init_supply(15 houses, 1 scoring marker, 1 storehouse)
fill_storehouse(2land + 2 sea colonist, 2 food, 1 cloth, 1 wine, 1 brick, 1 tool)
place_colonist(player, LAND, ROMA)
place_colonist(player, SEA, ROMA)
place_scoring(player, 0)
select_starting_cards()
7 starting card rows
[i == config.nb_player]
personalityCard(name, god, actions)
add_to_hand(card)
add_player(player)
set_start_player(rng)
[for each player, in turn order (rank r = 0 .. nb_players-1)]
receive_sesterii(5 + r)
give(PRAEFECTUS MAGNUS)
close()
game
GameView(ctrl)
